

Maintenance Pellet

65 - 9

This pellet is used as an introductory feed prior to cattle or sheep being placed on a high grain formulation. It is used in the live shipping trade where it is introduced to cattle whilst in holding yards and also used on board vessels to feed cattle during their voyage.

RATION ANALYSIS:

Gilmac pellets are made to the highest standards. The fibre ingredient used is Oaten Hay of Export quality. The nutritional parameters for each of our rations are achieved, through using high IVD and WSC hay combined with Cereal straw, Lupins and Barley as our main ingredients. The high fibre content provides for improved rumen development to help prevent against acidosis.

Nutritional Analysis:

Crude Protein (min)	11.0%
Metabolisable Energy (est)	9.0 MJ/kg

Ingredient selection:

Oaten Hay
Cereal Straw
Lupins
Barley
Lime (max) 3.0%

These products are free from Restricted Animal Material as required by State Legislation
